SUMMARY

Computer Science undergraduate (Mobile and Game Technology) at BINUS University with hands on experience building apps in SwiftUI, React Native, and Flutter, plus backend and database work with Supabase. Originated a car rental MVP with a 93.5 SUS score, and now builds the backend of a driver safety app with AI features. Seeking a Software Engineer internship across mobile, front end, backend, and AI.

EDUCATION

BINUS University, Semarang, Indonesia *Expected Graduation: August 2028*
Bachelor of Computer Science, Mobile and Game Technology stream, currently in Semester 5
Relevant coursework: Data Structures, Database Technology, Machine Learning, Computer Vision, Hybrid Application Development, Mobile & Game Development Capstone, User Experience

TECHNICAL SKILLS

Mobile and Front End: Swift, SwiftUI, SwiftData, MVVM, React Native, Flutter, Xcode, Core ML
Backend and Data: Supabase (PostgreSQL), REST API integration, Python
ML and Computer Vision: Python, NumPy, OpenCV, image processing
Game Development: Unity, C#, RCCP vehicle physics
Other: Git, AI coding assistants, UX research (usability testing, SUS/NPS), Scrum with weekly sprints, Trello

PROJECTS

Anterin, Premium Car Rental Platform (Team Project) *React Native · Web · Supabase*
- Originated the concept and led prototype design in a five member UX course team (two active contributors), owned Vercel deployment and domain setup, and reached a 93.5 SUS score and a Net Promoter Score of 100.
- Rebuilding the product solo as a React Native app with a Supabase (PostgreSQL) backend, REST calls for booking and status, geolocation, and dynamic theming.

Driving Buddy, Driver Safety App (Capstone, In Progress) *Backend · Database · AI*
- Responsible for the backend and database of a capstone team building a companion app that detects driver drowsiness and keeps drivers alert through a voice based conversational AI assistant.
- Designing drowsiness detection around a pretrained model, plus a social safety leaderboard that encourages safer driving habits.
- Working in Scrum with weekly sprints, story point planning, and Trello, with the goal of a public release on Google Play Store.

PosyanduKu (Pusporini), Native iOS App *SwiftUI · SwiftData · Core ML*
- Built a native iOS app (MVVM) digitizing community health post records across maternal, infant and toddler growth, and adult screening modules, with custom data structures (BST, sorting, graph).
- Added a before and after analytics module to measure the nutritional impact of a government free meal program on local children.

GamerMind, Mental Health Companion for Gamers (Team Project) *Flutter · FastAPI · ML*
- Built the Flutter front end for a four member team, integrating real time risk scores from teammates' Random Forest and K Means models through a teammate's FastAPI backend, and helped create the ten slide pitch deck. Working iOS prototype rated above class average by faculty.

Kansei: Redline Chronicles, 3D Racing Game *Unity · C#*
- Designed a drift focused 3D racing game with inertia based handling, live telemetry HUD, and lap validation; recommended by faculty for inter university competition entry.

ORGANIZATIONAL & COMMUNITY EXPERIENCE

- Member, HIMTI (Himpunan Mahasiswa Teknik Informatika), BINUS University (2024 to 2025)
- Member, IMCB, BINUS University (joined 2024)
- Member, KMH (Keluarga Mahasiswa Hindu), BINUS University (2024 to Present); volunteered in a temple cleanup and prayer service at Pura Pucang Sari, Klaten (2025)
- Volunteer (IT/Information), Karang Taruna Posyandu Program, supporting monthly community health outreach, including data management for child growth and family records
